

2019-08-29 C++ Recap Scratch Pad

Thursday, August 29, 2019

8:58 AM

Passing values to functions

1. Pass by reference (most languages) -- do this instead
2. Pass by value (most languages) -- original attempt
3. Pass by pointer (C++)

Pass by reference deletes the pointer to the original file object, doesn't touch file pointer (good)
